

## Power up your EV Charging with the Charge-It Rider

Our new **Charge-It Rider** is designed for commercial customers who have installed EV charging on a separate meter under one of our Power & Light rate plans. This addition provides an adjustment based on regularly measured billing demand during the first four years of implementation, resulting in savings for customers as the EV market grows and utilization of EV chargers increases. As your load factor improves over time, your adjustment will gradually level out and phase out when your average load factor exceeds 15%.

### Demand Discount Over Time:

Bills / Months	Demand Adjustment*
1 – 12	80%
13 – 24	60%
25 – 36	40%
37 – 48	20%

*\*Demand adjustment on regular measured billing demand. Charge-It rider will be discontinued if/when 12-month average load factor exceeds 15%.*
